## Professional Experience

**Project Manager** | Synkcode **Sep 2026 – Present**

- Manage delivery across **4 projects spanning 3 codebases**, translating client documentation and discussions into actionable Jira tasks, coordinating team leads and developers, and tracking dependencies, blockers, milestones, and deadlines.
- Oversee application and server stability across development, staging, and production environments, coordinating technical triage and resolution with team leads.
- Implemented approximately **40% of 84 documented use cases** for a Dubai Customs platform, delivering Django backend functionality and REST APIs alongside additional requirements gathered through client discussions and documentation.

**Python Developer** | Synkcode **Feb 2026 – Sep 2026**

- Added Arabic localization to an English-only application, adapting UI layout, navigation, text direction, and incoming-data presentation for both left-to-right (LTR) and right-to-left (RTL) languages while preserving the English experience.
- Integrated Kafka consumers and producers across upstream and downstream services, processing incoming declarations through risk assessment and optimizing declaration-to-risk-profile matching with candidate filtering, indexing, and hashing.

**Software Development Engineer I** | Galvanize Global Education **Nov 2023 – Jan 2026**

- Developed Django backend services and REST APIs for production education products, implementing application logic and database-backed workflows.
- Led migration of legacy PHP functionality to Django and Angular, improving maintainability and reducing infrastructure and operational costs by approximately **40%**.
- Applied test-driven development to backend changes, reducing reported bugs by **60%** and strengthening regression confidence.

## Skills

**Languages:** Python, Java, JavaScript, TypeScript
**Backend:** Django, REST APIs
**Frontend:** HTML, CSS, Angular, React, Bootstrap
**Databases & Caching:** PostgreSQL, MySQL, Redis
**Messaging & Streaming:** Apache Kafka
**Cloud & DevOps:** Docker, Kubernetes, GitHub Actions (CI/CD), AWS EC2, Cloudflare, Civo

## Selected Engineering Projects

**IELTS Assessment Module** | *Django, Angular, PostgreSQL*

- Designed and implemented an end-to-end IELTS assessment workflow supporting **2,000+ active users**, covering test delivery, response evaluation, and score computation.
- Built integrated REST APIs and Angular frontend flows for realistic exam scenarios, contributing to a **20% increase in IELTS enrollments** post-launch.
- Structured reusable exam logic across multiple test types, improving reliability and scalability while reducing new-exam onboarding time by **30%**.

**Graph-Based Score Prediction System** | *GRE, TOEFL, SAT*

- Built score-prediction logic using answer correctness, response time, assessment history, and exam-blueprint topic weightings to estimate student performance across standardized exams.
- Represented exam concepts in a hierarchical graph with scores normalized to a 0–1 scale; propagated changes incrementally from affected leaf nodes to the root rather than recomputing the full tree, achieving over **80% reported prediction accuracy** against actual student scores.

**CareerByteCode – Backend & Platform** | *Node.js, PostgreSQL, Redis, Kubernetes*

- Designed modular backend APIs and PostgreSQL data models, using Redis for caching and separating core service responsibilities.
- Deployed staging and production environments on Civo Kubernetes with load balancing and fault tolerance, maintaining API latency below **300 ms** and infrastructure costs below **$100/month**.
