Professional Experience

Python Backend Engineer, Synkcode Feb 2026 – Present

- Develop and maintain backend services across 6+ interconnected microservices using Django, Celery, PostgreSQL in customs compliance platform handling 500+ daily transactions.
- Deliver features, bug fixes, and system integrations including asynchronous event processing and authentication layer integration with zero production incidents.
- Collaborate on end-to-end ownership of microservice improvements spanning backend infrastructure, API design, and frontend user workflows.

Software Development Engineer I, Galvanize Global Education Nov 2023 – Jan 2026

- Developed and scaled backend services using Django and REST APIs, supporting 2000+ active users across standardized test preparation platforms.
- Owned end-to-end delivery of core platform features across backend and frontend, contributing to 50% of shipped functionality and increasing release velocity by 35%.
- Led legacy migration from PHP to Django and Angular, reducing infrastructure costs by 40% and decreasing system maintenance overhead by 30%.

Technical Skills

Languages: Python, JavaScript, TypeScript
Backend & Frameworks: Django (Django REST Framework), Node.js, REST APIs
Async & Message Queues: Kafka, Celery, Django-Beat, event-driven data pipelines
Databases & Caching: PostgreSQL, MySQL, Redis
Frontend: Angular, React, Vanilla JavaScript, HTML5, CSS3
DevOps & Infrastructure: Docker, Kubernetes, GitHub Actions CI/CD, AWS EC2, Cloudflare, Civo

Engineering Projects

Kafka Consumer Implementation — Synkcode Production System

- Implemented Kafka consumer for event ingestion service, processing 1000+ messages daily and reducing invoice processing latency by 18% through asynchronous state transitions.
- Integrated with Celery task queue to distribute background jobs across workers, enabling parallel event processing across dependent microservices.

UI Redesign and Modernization — Synkcode Production System

- Redesigned microservice UI using vanilla HTML, CSS, JavaScript from Figma specifications, reducing form completion time by 12% and improving usability.
- Improved user navigation patterns and interaction flows, decreasing user support tickets by 15% post-deployment.

IELTS Assessment Module — Galvanize Global Education Production System

- Implemented end-to-end IELTS assessment workflow supporting 2000+ active users, delivering test delivery, response evaluation, and score computation at scale.
- Increased IELTS platform enrollments by 20% post-launch through optimized user workflows and reduced assessment completion time by 25%.

CareerByteCode Backend Platform — Founder-Initiated Shutdown Founder-Led Pivot

- Architected and deployed production Node.js backend serving user, content, and assessment workflows with sub-300ms API latency (95% of requests) and 99.9% uptime over 6-month runtime while maintaining infrastructure costs under 100/month.
