Professional Experience

Software Development Engineer II, Synkcode Feb 2026 – Present

- Developing and maintaining **backend features using Django**, resolving production bugs and implementing feature enhancements across modules.
- Leading **end-to-end UI redesign** for a core module using HTML, JavaScript, and Bootstrap, improving usability and maintainability.

Software Development Engineer I, Galvanize Global Education Nov 2023 – Jan 2026

- Developed and scaled **backend services using Django and REST APIs**, supporting **2K+ active users** across multiple standardized test preparation platforms.
- Owned end-to-end delivery of core platform features across backend and frontend, contributing to **50% of shipped functionality** and improving release throughput.
- Led a **legacy migration from PHP to Django + Angular**, improving long-term maintainability and reducing infrastructure and operational costs by **40%**.

Skills

Languages: Python, Java, JavaScript, TypeScript

Backend: Django, Node.js, REST APIs, Monolithic Architecture

Frontend: Angular, React

Databases & Caching: PostgreSQL, MySQL, Redis

Cloud & DevOps: Kubernetes, Docker, GitHub Actions (CI/CD), AWS EC2, Cloudflare, Civo

Independent Engineering Work

Backend & Platform Engineer, [CareerByteCode](#) Oct 2024 – Present

- Designing and implementing a backend system from scratch using **Node.js**, with modular APIs, database schemas, and core platform services for a pre-launch platform.
- Deployed and operated infrastructure on **Kubernetes (Civo)** with production and staging environments, load balancing, and fault tolerance.
- Enforced **sub-300ms API latency** and maintained infrastructure costs under **\$100/month** using **PostgreSQL (Neon DB)**, **Redis**, CI/CD pipelines, and CDN-based deployments.

Selected Engineering Projects

IELTS Assessment Module — Django, Angular, PostgreSQL Production System

- Designed and implemented an end-to-end **IELTS assessment workflow** supporting **2K+ active users**, including test delivery, response evaluation, and score computation.
- Built and integrated **backend REST APIs and frontend flows** to support real exam scenarios, contributing to a **20% increase in IELTS enrollments** post-launch.
- Improved assessment reliability and scalability by structuring exam logic for reuse across multiple test types, reducing new exam onboarding time by **30%**.

Predicted Score Engine — Django, Data Modeling Production System

- Refactored a tightly coupled scoring mechanism into a **modular prediction engine** reused across **4+ exam formats**, improving system extensibility.
- Standardized input representations, normalization logic, and edge-case handling, reducing scoring inconsistencies by **40%** across assessment attempts.
- Enabled faster rollout of new scoring rules and exam variants, cutting development effort for score-related changes by **35%**.
